

No need to remove the old roof, interrupt business, or cause possible weather damage.

“We have successfully completed several EZROS projects to date installing approximately 75,000 square foot. No doubt, this system is the best retrofit system on the market today.”

—Rowland Seal
Roof Technologies, Harvey, LA

DON'T PAY TO REMOVE
THE OLD ROOF...E-ZEE
ROOF OVER IT!

Requires up to **40%** less fasteners and labor than other one piece systems.

Job-specific engineering and full warranties available.

“ We have included system warranties on several projects with the EZROS framing system. Truly a revolutionary way to retrofit roofs. The EZROS system allows for some vertical adjustments to correct minor sags or bumps in the existing roof surface. EZROS also provides for all projects custom eave members and rake angles. EZROS is number one in our book.”

—CW Bennett CEO
CW Bennett Jr. GM, AMB Warranty

Complete system components, sub eave, sub rake, sub ridge, etc... to complete project properly.

“ Great system. The contractor installed approximately 80% of EZROS framing before installing roof panels on a 130,000 square foot building with little to no interruption to the operations inside the building. We will certainly specify this system on future projects.”

—Stephen Braquet,
AIA Architect, New Orleans, LA

Allows for optional insulation and achieves a thermal break with air space between old and new roof.

Custom lengths to fit you project.

Less restrictions of water flow on old roof when caught in weather during installation.

Zee shape design emulates shape of sub-purlins.

Increased wind load capacity in high wind zone areas of the roof as required in hurricane coastal areas.
